

roHdmiHotPlugEvent

The roHdmiStatus sends the roHdmiHotPlugEvent with the following predicates that indicate its valid event types:

isHdmiHotPlug() as Boolean

An HDMI hot plug has occurred.

GetMessage() as String

Returns the string "HdmiHotPlug".

GetIndex() as Integer

The index value of this event is not used and is always set to 0.

GetInfo() as Object

Returns an associative array with the following key/value pairs:

Key	Type	Value
PortType	string	"Rx" for input ports and "Tx" for output ports
PortNumber	integer	The HDMI input or output port number starting from 0
Plugged	Boolean	True if an HDMI device is plugged in, and false if the port is unplugged
