

# ifAppInfo

## Implemented By

- roAppInfo

## Supported Methods

- GetID() As String
- IsDev() As Boolean
- GetVersion() As String
- GetTitle() As String
- GetSubtitle() As String
- GetDevID() As String
- GetValue(key As String) As String

## Description of Methods

### GetID() As String

Returns the app's channel ID, e.g. "12345" or "dev".

### IsDev() As Boolean

Returns true if the application is side-loaded, i.e. the channel ID is "dev".

### GetVersion() As String

Returns the conglomerate version number from the manifest, e.g. "1.2.3", as formatted *major\_version* + *minor\_version* + *build\_version*.

### GetTitle() As String

Returns the *title* value from the manifest.

### GetSubtitle() As String

Returns the *subtitle* value from the manifest.

### GetDevID() As String

Returns the app's developer ID, or the keyed developer ID, if the application is side-loaded.

### GetValue(key As String) As String

Returns the named manifest value, or an empty string if the entry is does not exist.
